1 Equations

Energy is conserved, so $E = mc^2$ holds for a particle at rest, and a fraction such as $\frac{a}{b}$ sits inside the line. Equation (1) is Euler's identity:

$$e^{i\pi} + 1 = 0 \tag{1}$$

and the next display is not numbered:

$$\sum_{k=1}^{n} k = \frac{n(n+1)}{2}.$$

Aligned equations line up at the relation:

$$f(x) = x^2 + 2x + 1 \tag{2}$$

$$= (x+1)^2. \tag{3}$$

Section 1 has equations (2) and (3), and

$$\alpha + \beta \le \sqrt{\gamma^2 + \delta^2}$$

ends it.
